

Petre-Flaviu Gostin graduated as a Materials Science Engineer at University Politehnica Bucharest, Romania in 2004. In 2011, he was awarded his PhD title at Technical University of Dresden, Germany, on the topic of corrosion of iron-based bulk metallic glasses. Following his PhD, as a postdoctoral researcher at Leibniz Institute Dresden, he continued focusing on the corrosion behaviour of metallic glasses, e.g. stress corrosion cracking of zirconium-based alloys, pitting corrosion of novel beta-phase titanium-niobium and amorphous titanium alloys for biomedical implant applications. Between 2015 and 2018, he was a Marie Curie fellow at University of Birmingham, UK, where he characterised in situ corrosion products of a titanium amorphous alloy using synchrotron X-ray diffraction. He is currently developing his skills in research computing.
